

The chart displays the United States Money Supply index from January 1999 to January 2004. The historical data (labeled 'his') shows a steady increase from approximately 53 in early 1999 to about 74 in mid-2001. From mid-2001, the data transitions into a forecast. The forecast is represented by a red circle indicating the median, which continues to rise slightly to about 75 by January 2004. Surrounding the median are several shaded regions representing different probability levels: 10% (dark blue), 20% (medium blue), 30% (light blue), 40% (very light blue), 50% (light pink), and 60% (medium pink). These regions expand as time progresses, indicating increasing uncertainty in the forecast. The overall trend of the money supply index is upward, with the forecast suggesting a continuation of this trend.
