

The graph displays the United States Money Supply from January 1979 to January 1984. The historical data (blue line) shows a steady increase from approximately 17.5 in early 1979 to about 26.5 in mid-1981. From mid-1981, the money supply rises more sharply, reaching approximately 34 by January 1984. The forecast (red line) begins in mid-1981 at a value of about 26.5 and projects a continued upward trend, reaching approximately 34 by January 1984. Shaded areas represent confidence intervals: 10% (dark blue), 20% (medium blue), 30% (light blue), 40% (very light blue), 50% (lightest blue), and 60% (lightest blue/white). Red circles mark the median forecast points.

| Date | Historical Money Supply | Forecast Median |
|---------|-------------------------|-----------------|
| 1979 01 | 17.5 | - |
| 1980 01 | 20.0 | - |
| 1981 01 | 24.5 | - |
| 1981 07 | 26.5 | 26.5 |
| 1982 01 | - | 27.5 |
| 1983 01 | - | 31.0 |
| 1984 01 | - | 34.0 |
