

The chart displays the United States Industrial Production (IPI) from January 1971 to January 1976. The historical data (labeled 'his') shows a general upward trend from approximately 41 in early 1971 to a peak of about 50.3 in mid-1973, followed by a sharp decline to around 43.8 in early 1974. From mid-1974, the chart transitions into a forecast period. The forecast is represented by a central blue line and several surrounding shaded regions indicating different confidence levels: 10% (darkest blue), 20%, 30%, 40%, 50%, and 60% (lightest blue/pink). The median forecast (indicated by red circles) starts at approximately 47.8 in mid-1974, dips slightly to 47.0 in early 1975, and then rises to about 47.4 by January 1976. The 60% confidence interval widens significantly over time, ranging from about 43.5 to 51.0 in early 1976.

Date	Historical IPI (his)	Median Forecast	60% CI Lower	60% CI Upper
1971-01-01	41.0	-	-	-
1972-01-01	48.8	-	-	-
1973-01-01	44.2	-	-	-
1974-01-01	-	47.8	43.5	51.0
1975-01-01	-	47.0	43.0	50.5
1976-01-01	-	47.4	41.5	52.5
