

The graph displays the United States money supply index from January 1977 to January 1982. The historical data (labeled 'his') shows a steady increase from approximately 14.2 in early 1977 to about 21.2 in early 1980. From early 1980, the data is replaced by a median forecast (red line with open circles) which continues the upward trend, reaching approximately 22.1 by January 1982. The forecast is accompanied by confidence intervals: a narrow blue band for the 10% interval, a wider blue band for the 20% interval, and a pink band for the 60% interval. The 60% interval widens significantly over time, indicating increasing uncertainty in the long-term forecast.

Date	Historical / Median	10% Interval (Lower/Upper)	20% Interval (Lower/Upper)	60% Interval (Lower/Upper)
1977 01	14.2	-	-	-
1978 01	16.8	-	-	-
1979 01	19.4	-	-	-
1980 01	21.3	21.1 / 21.5	20.8 / 21.8	20.5 / 22.5
1981 01	21.7	21.4 / 22.0	21.1 / 22.9	19.5 / 24.5
1982 01	22.1	20.6 / 23.6	19.6 / 24.4	18.5 / 28.4
